GQ-ASC Scale for Adult Women

Girls' Questionnaire for Autism Spectrum Condition, modified for adult women

Name:

Date:

This screening questionnaire is designed to identify behaviours and abilities in women that are associated with autism. Please read each question and statement very carefully, and rate how strongly you agree or disagree with it by selecting one response per row.

Imagination and play

1. I enjoy fantasy worlds

2. I am interested in fiction

3. When I was 5-12 years old, I played as imaginatively as other girls

4. When I was 5-12 years old, I had imaginary friends or imaginary animals

5. When I was 5-12 years old, I created my own complex 'set ups' with toys

Camouflaging

6. I copy or 'clone' myself on other females

7. I avidly observe other females socialising

8. I am attracted to females with strong personalities who tell me what to do

9. I adopt a different persona in different situations

Sensory Sensitivities

10. I am attached to certain objects or toys (e.g., favourite toy, pillow, piece of cloth) which I carry, touch, or rub to calm myself

11. I expressed distress during grooming (e.g., I fought or cried during fingernail cutting, haircutting, combing) or when I am touched (e.g., someone touches my feet)

12. Some social situations make me mute

13. I am distressed by certain smells or I avoid certain tastes that are a typical part of a diet

Socialising

14. I socialise quite well for a while, but subsequently feel exhausted

15. I often have a facial 'mask' that hides my social confusion

16. I have intense emotions

17. I apologise when I make a social error

Interests

	Definitely disagree	Slightly disagree	Slightly agree	Definitely agree
18. When I was 5-12 years old, I preferred to play with girls' toys				
19. When I was 5-12 years old, I preferred to play with boys' toys				
20. My interests were advanced for my age (e.g., opera)				
21. I am talented in music				

Scoring (clinician use):

Sum all response values (1-4). Reverse-score items 1, 2, 3, 4, 5, and 18. A total score greater than 56 indicates a high level of autistic traits (sensitive to 80% of cases).

Total score:
